EDUCATION

Depaul University

Bachelor of Science in Computer Science, Emphasis in AI

Chicago, IL

Expected Graduation: 2028

- **Details:** Grade: 3.925, Dean's List, Computer Science Society, Pickleball Club.

Belmont University

Completed 1.5 Years of Bachelor in Audio Engineering and Songwriting

Nashville, TN

Aug. 2021 – Dec. 2022

PROJECTS

ScoreboardRL — Full Stack Stat Tracker | TypeScript, React, Supabase, Gemini Vision API April 2026-Present

- AI Integration: Implemented Gemini Vision 2.5 Flash via Supabase edge functions to parse post-game scoreboard photos and auto-fill player statistics, eliminating manual data entry
- Data + Analytics: Built a custom contribution score algorithm normalizing team performance across 2v2, 3v3, and 4v4 game modes, with stat visualizations via Recharts
- Full-Stack Social Features: Developed a friend system with head-to-head stat comparison, rank progression tracking, and real-time data sync via Supabase PostgreSQL

Our Pantry — Real-Time Household Grocery PWA | TypeScript, Next.js, Supabase April 2026-Present

- Real-Time Sync: Architected shared pantry and grocery list with instant cross-device updates via Supabase Realtime subscriptions and optimistic UI updates
- Auth + Security: Implemented household system with invite codes, role-based permissions, and row-level security ensuring users can only access their own household data
- Mobile PWA: Deployed as an installable Progressive Web App with offline support, haptic feedback, and mobile-optimized UI

Subway Builder Custom Map Mods (7 Maps, 860+ Downloads) | Python, Node.js, GeoJSON, Github Feb 2026

- Data Engineering: Processed real-world US Census (LODES) origin-destination data using Python to simulate city-wide transit demand
- Geospatial Implementation: Managed and optimized large-scale geospatial datasets including .pmtiles and .geojson for real-time map rendering

7even—Lead Full Stack Dev (Hackathon) | Typescript, Node.js, MongoDB, React Native, Github Feb 2026

- Rapid Full-Stack Deployment: Built and deployed a dating MVP for Chicago students in 24 hours, matching users weekly via psychology-backed personality and values testing
- System Architecture: Architected a Monorepo using NestJS (API and Worker) and React Native to ensure seamless logic sharing and feature parity across platforms
- Engineering and Security: Implemented .edu OTP verification with Argon2 hashing and a background matching engine for weekly Sunday pairings

EXPERIENCE

Barista/FOH

Peet's Coffee

2025 – 2026

Chicago, IL

- Operated in a high-volume, time-critical environment requiring accuracy, prioritization, and rapid task switching across peak demand periods

Self-Managed Singer/Songwriter

JDC MUSIC LLC: @joncarylmusic

Jan. 2020 – Dec 2025

Cleveland, OH and Nashville, TN

- John Lennon Songwriting Contest Grand Prize Winner
- Built following of 850,000+ across social platforms; leveraged data analytics to drive 100M+ streams
- Operated as a full record label — managing contracts, brand strategy, content, and a tour across six countries

TECHNICAL SKILLS

Languages: Python, Java, Typescript, JavaScript

Concepts: Object-Oriented Programming, Recursion, Data Structures

Developer Tools: Git, VS Code

Frameworks/Libraries: React Native, NumPy, NestJS, Node.js, Next.js, Socket.io

Database/Cloud: Supabase, MongoDB, Firebase (OTP/Auth)
